

## Aegis Power Wins \$448,000 VME450 Order

Aegis Power Systems today was awarded a \$448,000 order for the VME450 MIL COTS power supply for use on the DDG1000 destroyer. The VME450A variant uses a convection cooling heat sink and is rack mounted for use in the ships power distribution panel for the Integrated Fight Through Power system. The Zumwalt Class DDG1000 is the Navy's next generation surface combat ship with superior capability. This order will support two ship sets and funding for a third ship is currently being negotiated for the 2009 budget. The VME450 uses a combination of Brick and VIC technology. Specifically, the power supply has two M-FIAM5Bs and a combination of six MIL COTS PRM/VTM sets. This is the first "custom standard" product co-branded by Vicor and Aegis. Customers can order product through Vicor or Aegis. Congratulations to Aegis and the Sales team!
